

Equifort

Equifort is a generative tomato rootstock enabling better control of the plant and a more balanced crop. Equifort directs its vigour and activity towards fruit production, leading to higher average fruit weight and a larger number of trusses.

Disease Profile

HR	ToMV:0-2/Fol:0,1/For/PI/Va:0/Vd:0
IR	Ma/Mi/Mj

Features

- // Increased average fruit weight of scion
- // Limits vegetation production (less leaf cover than DR0141TX and Maxifort)
- // Produces plants that are well balanced and vigorous
- // High number of clusters/trusses produced

Advantages

- // Equifort supports varieties which need higher average fruit weight
- // Easy to get the plant in balance with superior vigour
- // Easier to graft

Benefits

- // Allows higher yield potential thanks to its generative characteristics
- // Produces strong stems due to its vigour, reducing the risk of kinked trusses and producing better vine retention
- // Promotes early vigorous and generative balance, simplifying crop management throughout the season

Agronomics and Cropping Tips

Environment

- // Heated glasshouse on substrate

Season

- // Year round

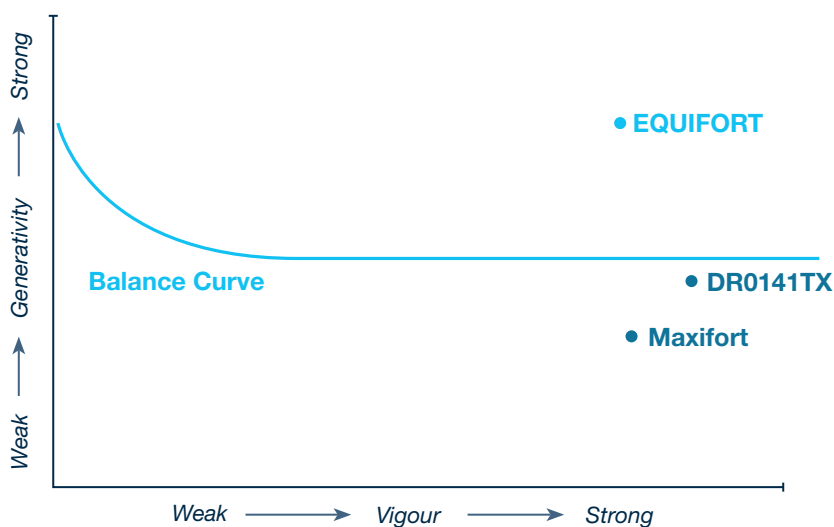

Specific advice

- // Equifort is a rootstock that directs its vigour and activity towards the fruit. Its generative nature is confirmed by the production of fruits of higher average weight and of a larger number of trusses. It can also lead to yields that are equal to or higher than those obtained with comparable commercial products.
